

Voluntary PVI Inclusion/Exclusion List

Inclusion to the PVI database:

- Endovascular interventions to all arteries on the artery map, except for carotids.
- Endovascular interventions for abdominal aortic stenosis.
- Endovascular interventions for peripheral aneurysm or pseudoaneurysm repair.
- Endovascular interventions for renal revascularization.
- Endovascular interventions for mesenteric revascularization.
- FMD diagnosis
- Trauma procedures
- Procedures that resulted from a complication from a prior or current procedure
- All procedures where a sheath was placed and intervention was attempted, even if the lesion was not able to be crossed with either a wire or device
- Any endovascular procedure that occurred during a surgical procedure (defined as hybrid procedure)

Please note: every new lab visit is a new procedure including procedures that are staged.

Exclusion to the PVI database:

- Any venous procedures
- Carotid artery procedures
- Abdominal Aneurysm repairs at any location, distal, mid, or thoracic
- Lytic infusion as a standalone procedure
- Embolectomy as a standalone procedure
- Fistulas or dialysis grafts
- Thoracic region stenting (pulmonary arteries)
- Patch angioplasty standalone procedures
- Coiling or embolization procedures
- Surgical repairs as standalone procedures
- Endovascular procedures where the sheath was unable to be inserted
